GRAPHICAL REPRESENTATION OF KEY RESULTS

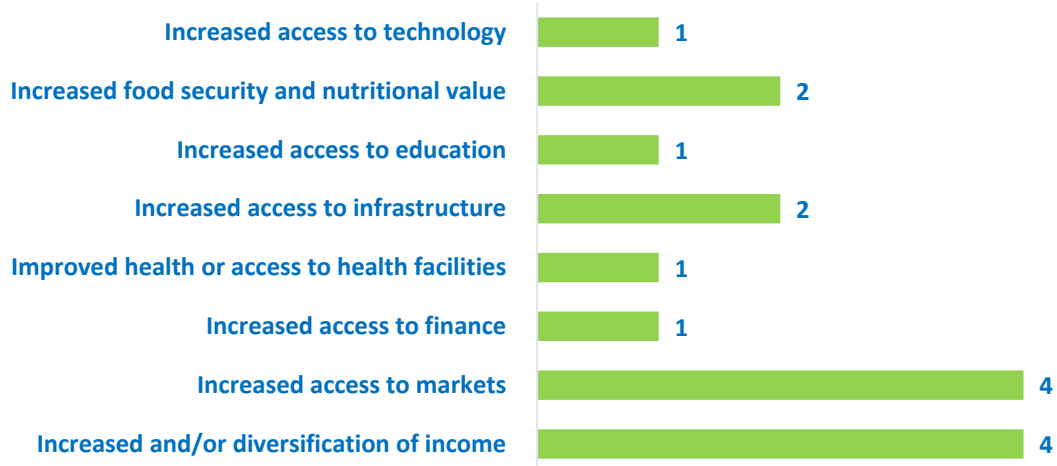

Interpreting the Green Bars in Graphs: The presence of green bars indicates the number of years that the country programme has achieved specific results. If a green bar is absent, it signifies that while the associated result is not observed in the country programme, it is still evident in the overall aggregated SGP portfolio.

**Number of Years Country Programme Deployed Gender Mainsreaming Strategies
(Over 6-year reporting period from 2017-2022)**

Number of Years Country Programme Deployed Strategies to Improve Community Livelihoods and Quality of Life
(Over 6-year reporting period from 2017-2022)

Number of Years Country Programme Deployed Market-based and Financial Mechanisms to Improve Community Livelihoods

EXAMPLES OF PROJECT RESULTS

South-South Exchange

In May and June 2022, **SGP Morocco** facilitated the participation of the High Atlas Foundation in regional online training on wastewater treatment for their reuse. Organized within the framework of the “Water and Environment Support” project funded by the European Union, the training enabled the capacity building and the exchange of experiences among more than 60 people representing the Mediterranean Partner countries (**Algeria, Egypt, Israel, Jordan, Lebanon, Morocco, Palestine, and Tunisia**) on the appropriate treatment of wastewater by focusing on small wastewater treatment plants. The exchange took place in four 4-hour sessions which strengthened the practical skills in terms of planning, construction, and exploitation of small wastewater treatment facilities. METHODOLOGICAL CONSIDERATIONS

All results are aggregated reflecting projects completed and are consistent with SGP results generated in past years.

With SGP's rolling modality, results reflect all ongoing operational phases during the indicated period. Please refer to the total projects completed on the first page for information in this regard.

The source of reported results is the annual monitoring process, which is part of the annual monitoring requirements for each country programme. Additionally, evaluative evidence sources have also been leveraged, if available for the country programme.

This results report benefits from extensive quality assurance. All information across all countries in the portfolio is harmonized, verified, and evidenced before being reported. Several layers of this quality assurance have been implemented in the generation of this report, and there are no result duplications across years. This point is important not only for the specific unit of measurement (i.e., indicator selected) but also for results aggregation across years in a given operational phase. Results reported across all countries have been treated uniformly to ensure overall standardization and methodological soundness.

Reported results include both direct and indirect global-environmental and socio-economic benefits. This is due to SGP's work in two key areas:

- **SGP works towards behavioral change at individual, organizational, and community levels.** Social determinants that shape human interaction with the environment play an important role, especially at the community level, as sustainability and the continuation of environmental gains often depend on them. These factors include positive shifts in knowledge, attitudes, practices, social and cultural norms, and conventions. Such interventions shape not only demand but also communication between community leaders and other influencers in promoting the adoption of environmentally friendly behaviors and practices. Often, SGP projects have ripple effects that go well beyond the direct scope of the project, emphasizing the importance of measuring indirect impact.
- **Encouraging Community Action for Environmental Change.** For many years, SGP has focused on promoting and supporting local community groups to bring about broader and sustainable environmental change. This approach is a key aspect of SGP's work and recognizes the power of motivated community groups to create significant impact and drive positive transformation. Community group action refers to informal gatherings of individuals and organizations in the community who share a common belief and purpose. It involves taking practical steps over time to address environmental and socioeconomic challenges and creating positive change. This grassroots-level approach relies on the active involvement and empowerment of the community, with the initial efforts acting as a catalyst for further mobilization. By encouraging self-governance and involving those most affected by the issues, community action can extend its influence to more people in the community, underscoring the importance of measuring indirect impact.
